About 3K Laboratory

Established in 2010, 3K Laboratory Plastics is a leading manufacturer and supplier dedicated to providing innovative solutions in the field of laboratory plastics, adding value to the industry. Our expert team's deep knowledge and experience in plastic injection and manufacturing technologies position us at the forefront of offering customized solutions to our clients. At 3K Laboratory Plastics, we continuously leverage the latest technology and innovative manufacturing processes to deliver the highest quality medical laboratory plastic products to our customers. Our extensive production capacity, flexibility, and prompt delivery advantages enable us to meet our clients' demands with excellence.

Experience and Expertise

At 3K Laboratory Plastics, we continuously leverage the latest technology and innovative manufacturing processes to deliver the highest quality medical laboratory plastic products to our customers. Our extensive production capacity, flexibility, and prompt delivery advantages enable us to meet our clients' demands with excellence.

Global Vision

In a world where technology has made geographical boundaries almost insignificant, 3K Laboratory Plastics presents its innovative, modern, and unique concepts to customers worldwide. Embracing the idea that organizations can thrive as long as they successfully adapt to the ever-changing conditions of the globalized world, our company aims to introduce its quality products to both domestic and international markets. Customer satisfaction is our top priority. At 3K Laboratory Plastics, we strive to make our customers feel well-cared for by offering meticulously prepared products and providing technical support and post-sales services. Our customers' feedback and needs continuously drive us to improve and enhance our services.

Dedicated to lab supplies

All the products supplied by 3K Lab are manufactured under ISO 9001:2015 & ISO 13485:2016 quality management system applied facilities, CE marked and quality guaranteed.

ISO 9001 :2015

ISO 13485:2016

MICROBIOLOGY

Microbiological Products

Microbiology is branch of science that deals with microorganisms, their evolution and classification as well as benefical and harmful effects of pathogens. Human diseases as created by arious bacteria are identified using a number of medical devices such as sample petri disehs ,loops ,etc.in laboratory tests.

Petri sample containers , loops , tubes and lids

Bacteriological Sample Petri Dish

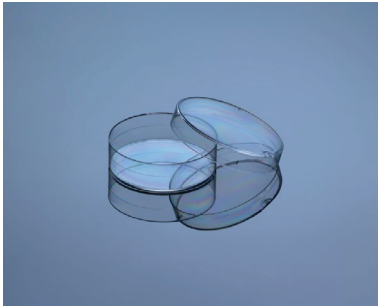

Petri Dish, Plastic Material

Single-use Petri dishes for microbiological procedures, as well suspension culture or plant cell culture

- Non-Cytotoxic virgin polystyrene, excellent optical clarity
- Engineered for optimum flatness to provide uniform agar thickness
- Single or more vents are available: novented for anaerobic and long-term work, single vented for limiting gas exchange, multi vented for improving gas exchange.
- The lid fits perfectly on the body

Pathology Products

Tissue cassettes are fitted with an integrated lid and contain rectangular holes. Tissue cassettes with lid are not affected by chemicals during tracking processes and do not automatically open. Tissue samples contained in cassettes can interact with relevant chemicals in sufficient quantities through large holes found on the cassette surface.

With/Without Lid-Separated

Tissue Processing /Embedding Cassettes

They are used in preparation of tissue for microscopic examination by tissue cassettes.

- It is manufactured by P.O.M raw Material.
- It has a 45 ° degree labeling area in front of the product.
- Dimensions in the rectangular area are 5.40x1.00 mm.
- 5 different color options are available.

Sample Containers

Urine culture and analysis containers are made of single-use plastic raw material and fitted with aseptic, sterile and non-sterile leakproof lid.

Urine sample containers ,sample containers,pneumatic containers.....

Urine Containers

Plastic Material

Measuring range is between 20ml and 100ml.

- Special twist-off leakproof lid.
- A designated area for data input and labeling is available.
- Lightweight, ensures easy handling and sampling

Test Tubes

Test tubes are among the required laboratory equipment. Test tubes are used for various culture methods other than those for microorganisms.

Falcon tube , 16x100 tube , 12x75 tube

Test Tube

Manufactured from either , polystyrene or Polypropylene

It is used in clinical research laboratories for routine processes such as preparation of culture medium, storage, etc.

They are intended for single use. Manufactured by fully automated machinery

Without human contact.

Manufactured in consistent thickness and weight form.

Stable.
quality production
